

# CHAPTER 3 MIGRATION - Rubenstein

- What is this a map of? (More specific than just a map of migration)

# Key Issues

- Where are migrants distributed?
- Where do people migrate within a country?
- Why do people migrate?
- Why do migrants face obstacles?

# Migration

- *Mobility* is most generalized term that refers to all types of movements
  - Journeying each day to work or school
  - Weekly visits to local shops
  - Annual trips to visit relatives who live in a different state
- Short-term and repetitive acts of mobility are referred to as *circulation*.
  - Ex. College students moving to college each fall and returning home each spring

# Migration

- A permanent move to a new location constitutes *migration*.
  - Emigration is migration from a location.
  - Immigration is migration to a location.
    - Place “A” can have individuals migrating away from and to it.
      - Emigrant: Place A → Place B
      - Immigrant: Place B → Place A
- Difference between the number of immigrants and number emigrants is a place’s *net migration*.

# Distance of Migration

- Ravenstein's laws for the distance that migrants typically move
  - Most migrants relocate a short distance and remain within the same country.
  - Long-distance migrants to other countries head for major centers of economic activity.

# Distance of Migration

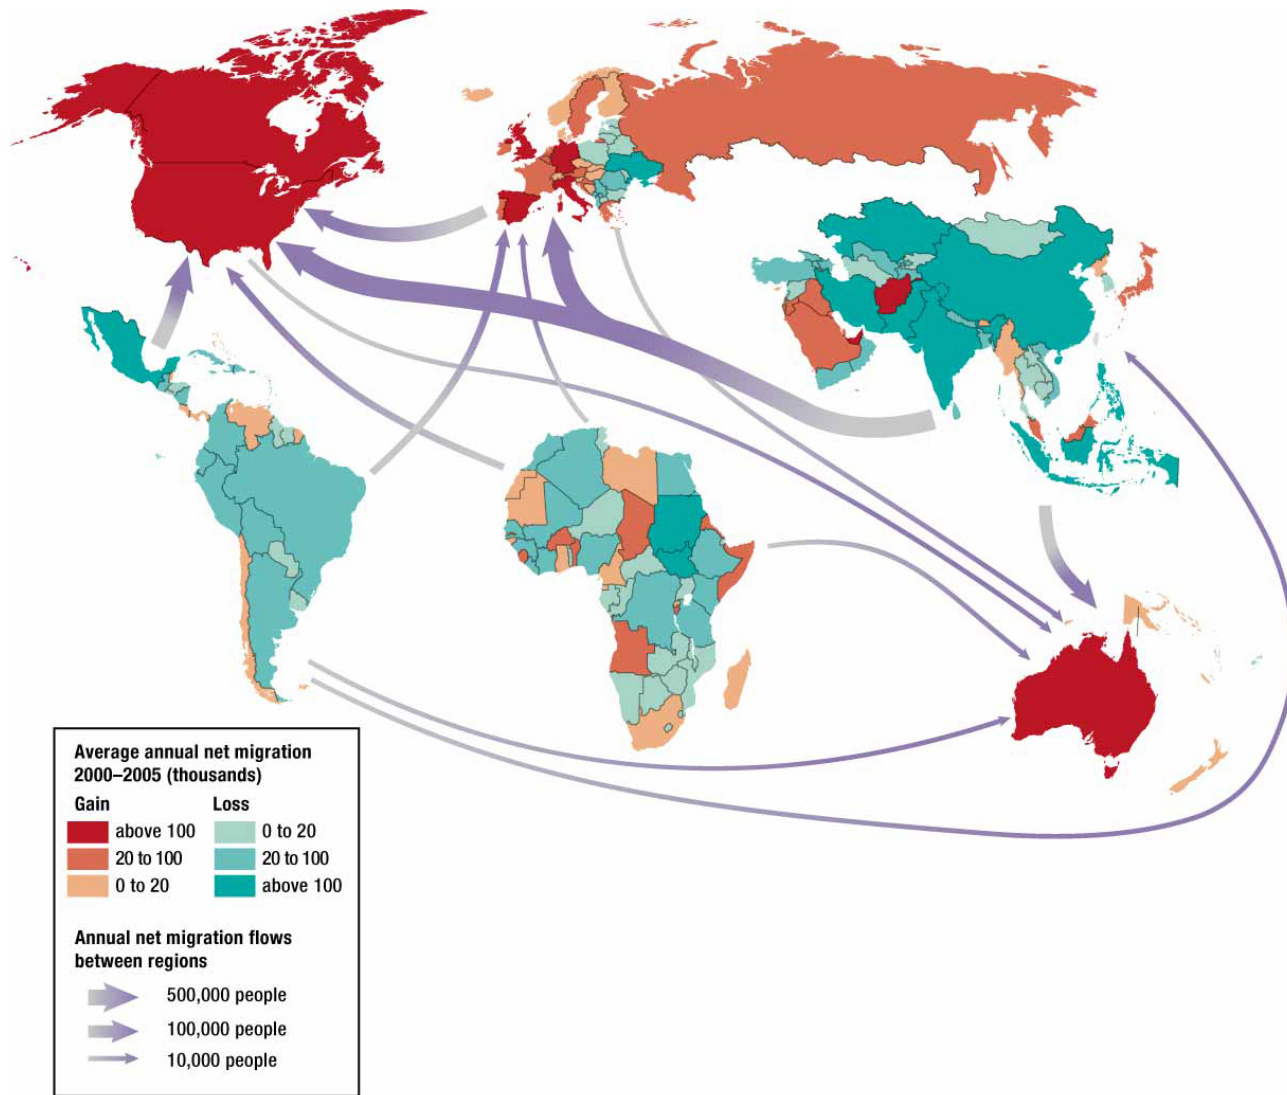

- Migration can be divided into two categories.
  1. International Migration- permanent move from one country to another
    - Voluntary
    - Forced
  2. Internal Migration- permanent move within the same country
    - Interregional
    - Intraregional

# International Migration Patterns

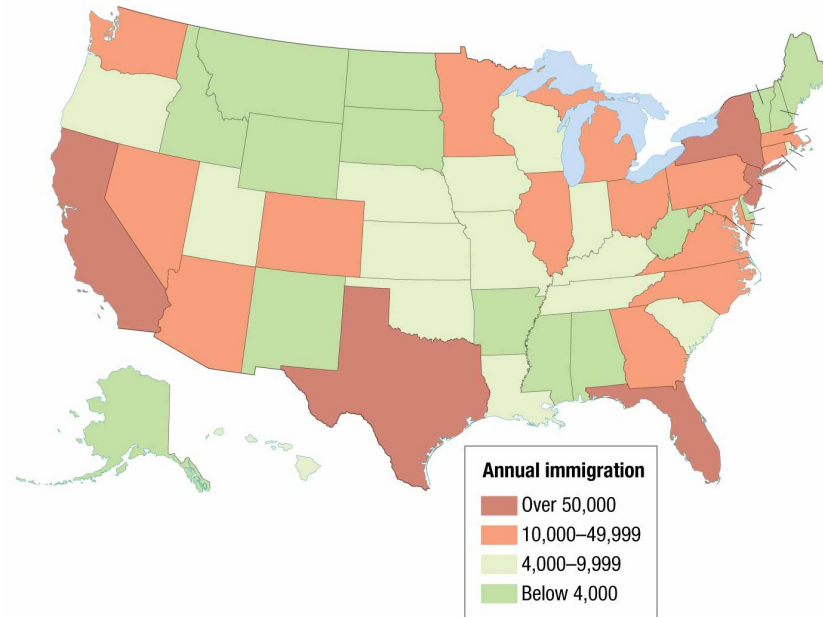

- Approximately 9 percent of the world's people are international migrants.
- Global pattern reflects migration tendencies from developing countries to developed countries.
  - Net Out-Migration
    - Asia, Latin America, and Africa
  - Net In-Migration
    - North America, Europe, and Oceania

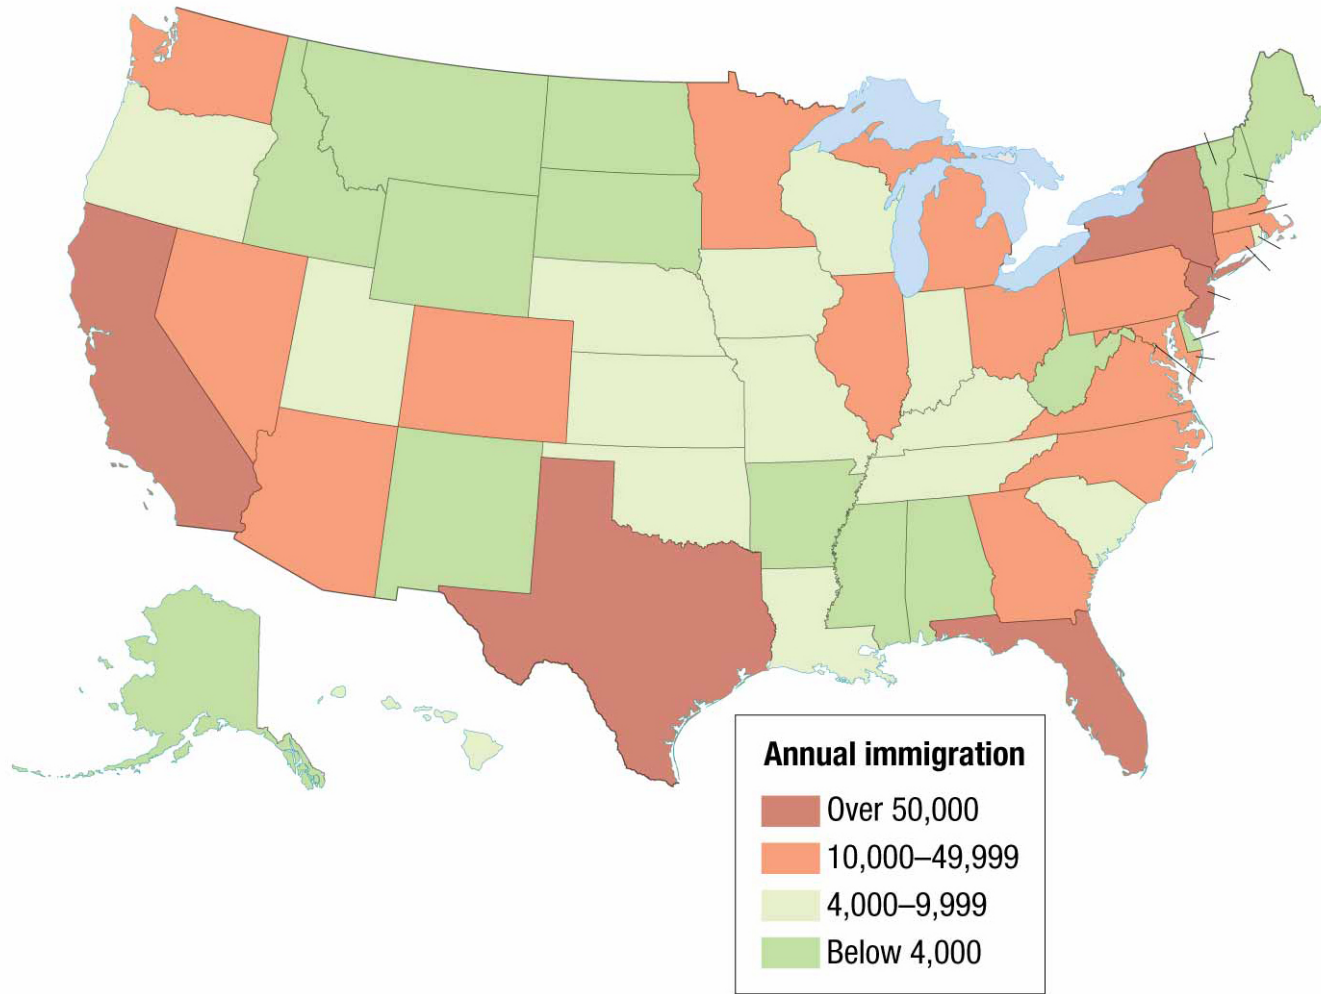

# U.S. Immigration Patterns

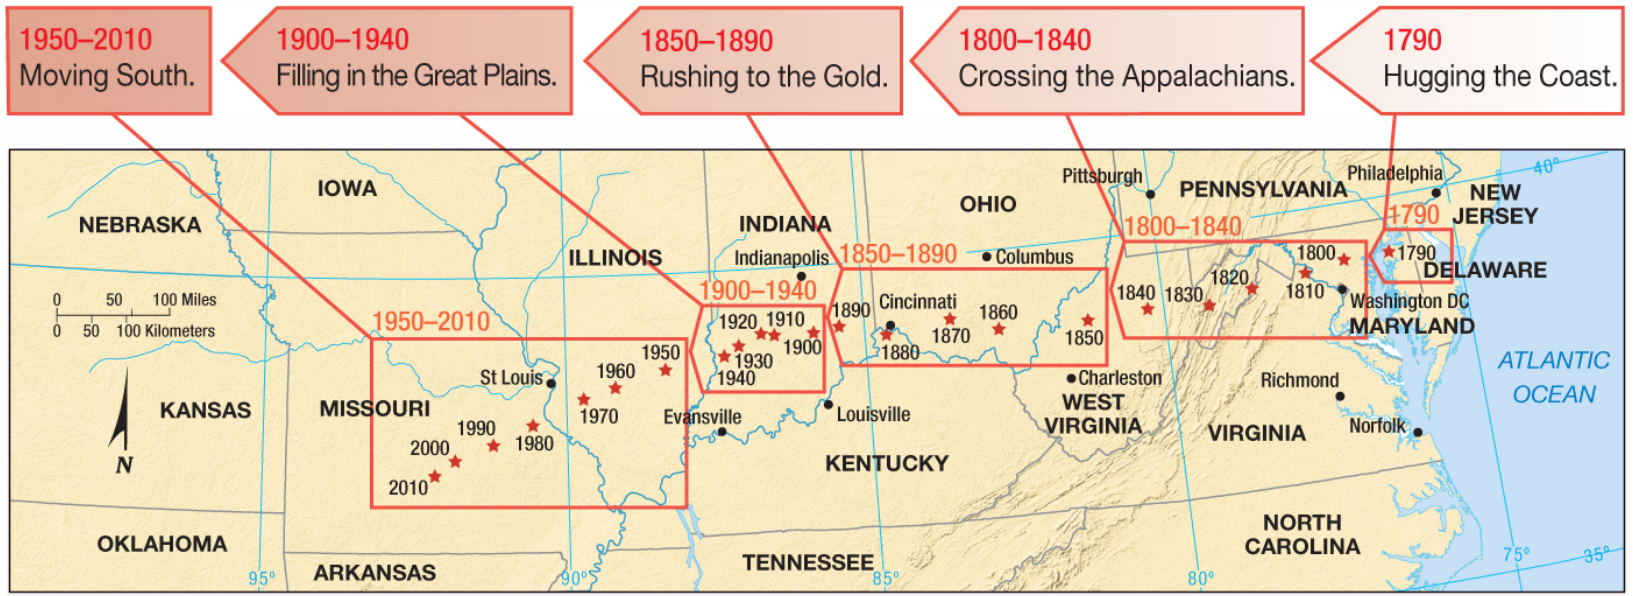

- U.S. has more foreign-born residents than any other country: approximately 43 million as of 2010—growing by 1 million annually.
- Three main eras of immigration in the U.S.
  - Colonial settlement in seventeenth and eighteenth centuries
  - Mass European immigration in the late 19<sup>th</sup> and early twentieth centuries
  - Asian and Latin American integration in the late Twentieth and early twenty-first centuries

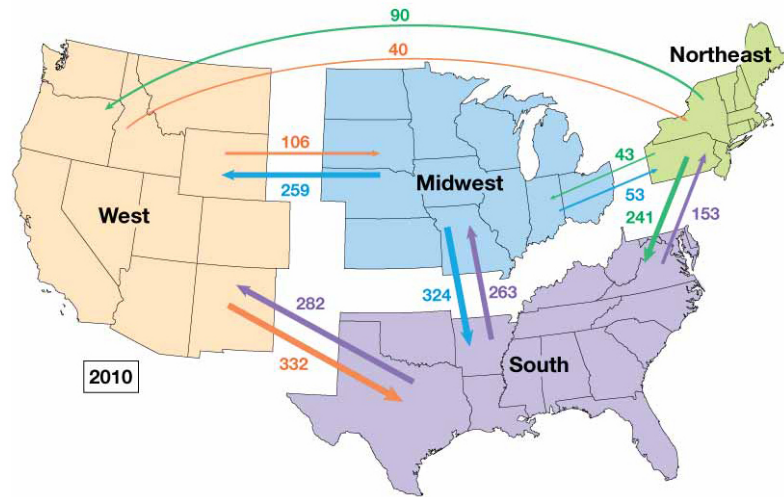

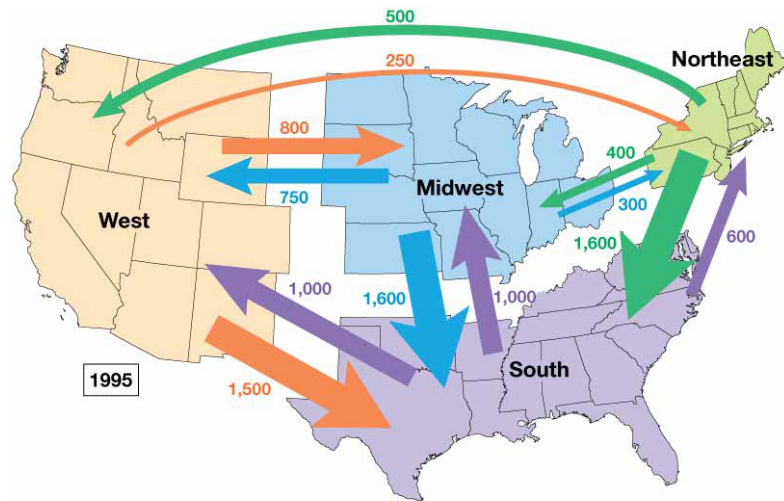

# KI #2 Where Do People Migrate within a

- Interregional Migration
  - Perceived economic betterment typically compels individuals to make interregional migrations.
    - Historically- enticement of abundant available land on the American Frontier.
    - Presently- most jobs, especially in services, are clustered in urban areas.
  - Westward expansion contributed to a shift in the center of population.
    - “Center of population gravity”

# Migration between Regions in Large Countries

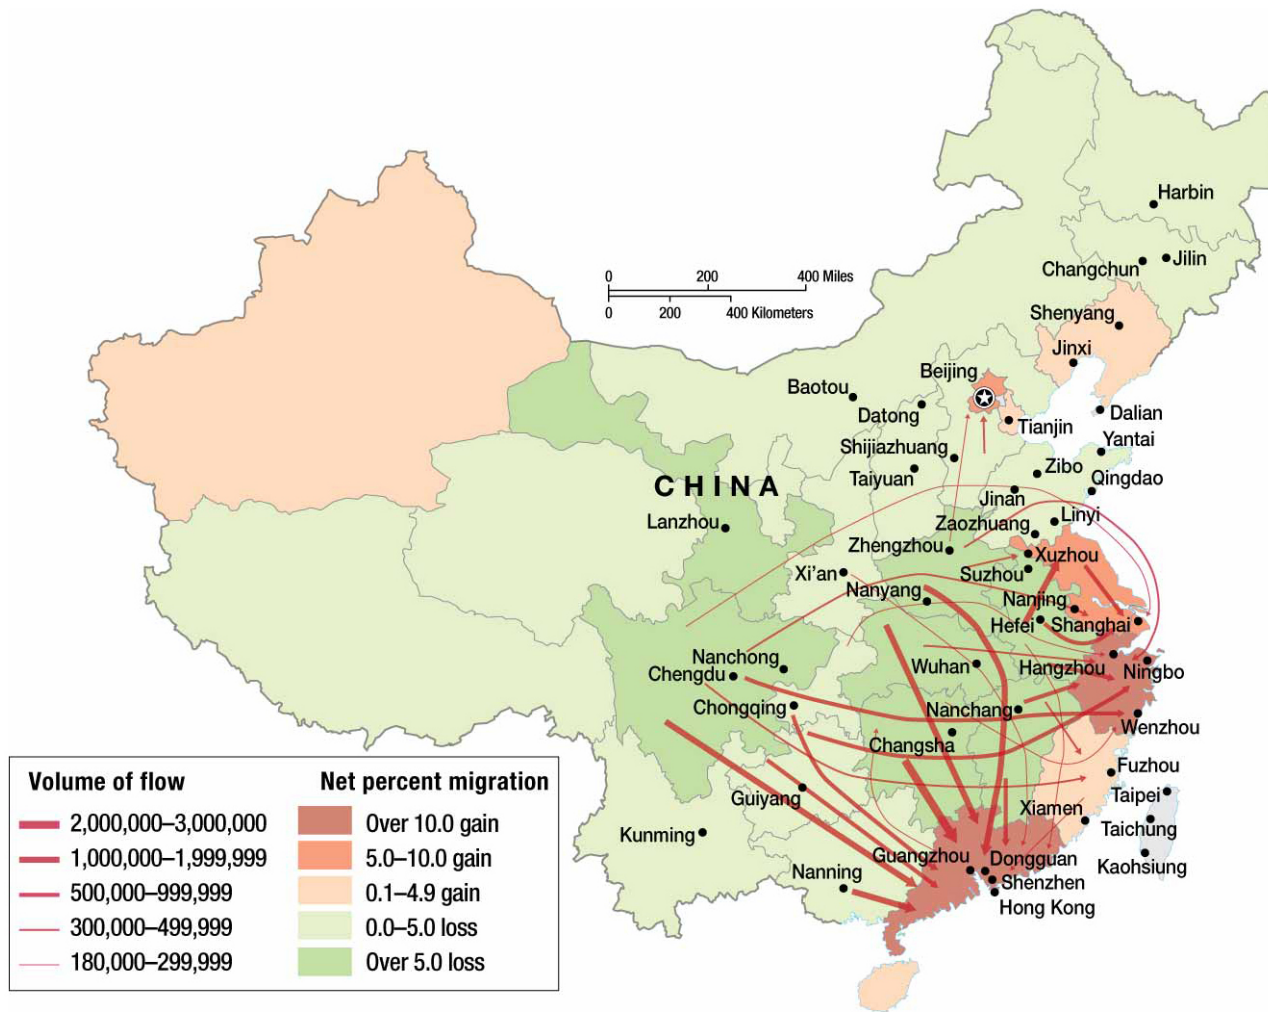

- World's five largest countries in land area are Russia, Canada, China, the U.S., and Brazil.
  - Russia: Interregional migration was encouraged eastward and northward by the government's decision to locate new factories and to offer economic incentives away from existing population concentrations.

# Migration between Regions in Large Countries

- Canada: Shares a similar east to west interregional migration pattern with the U.S. Three westernmost provinces are destinations for interregional migrants.
- China: Nearly 100 million people have emigrated from rural interior to large urban areas along east coast where manufacturing is prevalent.
- Brazil: Government moved its capital from Rio De Janeiro to Brasília (600 miles from Atlantic Coast) to encourage migration of Atlantic coast residents to move to the interior.

# Intraregional Migration

- Since Industrial Revolution began in Europe in nineteenth century, a global trend for individuals to migrate from rural to urban areas
  - Percentage of urbanized population in U.S.
    - 1800: 5 percent
    - 1920: 50 percent
    - 2010: 80 percent
  - Motivated by economic advancement

# Intraregional Migration

- Most intraregional migration in developed countries is from cities out to surrounding suburbs.
  - Motivated not by economic advancement but by a desired lifestyle
    - Additional privacy associated with single-family detached houses
    - Garages and driveways offer parking at no additional fee
    - Often superior suburban schools

# Intraregional Migration

- Developed countries experienced a new migration trend during the late twentieth century when rural areas were characterized by net in-migration.
  - Net migration from urban to rural areas is called *counterurbanization*.
- Counterurbanization most prevalent in places rich with natural amenities
  - Rocky Mountain States (Colorado, Idaho, Utah, and Wyoming)

# KI #3 Why Do People Migrate?

- People decide to migrate because of a combination of two factors.
  - *Push* factors induce people to move out of their present location.
  - *Pull* factors induce people to move into a new location.
- Three major types of push and pull factors
  1. Political
  2. Environmental
  3. Economic

# Reasons for Migrating

- *Political* factors can be especially compelling push factors, forcing people to migrate from a country.
- United Nations High Commissions for Refugees recognizes three groups of forced political migrants.
  1. A *refugee* has been forced to migrate to avoid a potential threat to his or her life, and he or she cannot return for fear of persecution.

# Reasons for Migrating

2. An *internally displaced person (IDP)* is similar to a refugee, but he or she has not migrated across an international border.
3. An *asylum seeker* is someone who has migrated to another country in hope of being recognized as a refugee.

# Reasons for Migrating

- *Environmental* factors can prompt migration from hazardous environments or pull migrants to attractive regions.
  - Environmental Pull Factors
    - Mountains
    - Seasides
    - Warm Climates
  - Environmental Push Factors
    - Water: most common environmental threat
      - Flood
      - Drought

# Reasons for Migrating

- Most people migrate for *economic* reasons.
  - Push factor: migrate away from places with few jobs
  - Pull factor: migrate to places where jobs seem to be available
- U.S. and Canada have been prominent destinations for economic migrants.
  - Historically individuals migrated from Europe.
  - More recently Latin America and Asia are primary senders.

# KI #4 Why Do Migrants Face Obstacles?

- *Intervening obstacles*, which hinder migration, can be categorized into two types.
  1. Environmental Feature- i.e., mountain, ocean, or distance
  2. Political Feature- i.e., countries require proper documentation to leave one country and gain entry in another

# Controlling Migration

- Countries have adopted selective immigration policies.
  - Preference shown for specific employment placement and family reunification
- Passing of the Quota Act in 1921 and the National Origins Act in 1924 by the U.S. Congress marked the end of unrestricted immigration to the U.S.

# Controlling Migration

- More seek admission to the U.S. than is permitted by the quotas, thus preferences are shown toward:
  - Family Reunification
    - About  $\frac{3}{4}$  of immigrants
  - Skilled Workers
    - Approximately  $\frac{1}{4}$  of immigrants
    - Sending countries alleged preference for skilled workers contributes to *brain drain*- a term for the disproportionate amount of highly skilled and intelligent citizens migrating away from sending countries.
  - Diversity
    - A few immigrants admitted, because their sending country historically has sent very few migrants

# Unauthorized Immigration

- *Unauthorized immigrants* are those who enter a country without proper documents.
- Characteristics of unauthorized immigrants in the U.S.
  - Source Country
    - Roughly 58 percent emigrate from Mexico
  - Children
    - Of estimated 11.2 million unauthorized immigrants, nearly 1 million are children.
    - Unauthorized immigrants have given birth to 4.5 million children on U.S. soil making the children U.S. citizens.

# Unauthorized Immigration

## – Years in the U.S.

- Duration of residency has increased for unauthorized immigrants.
- In 2010, 35 percent of adults had been in U.S. for at least 15 years.

## – Labor Force

- Approximately 8 million unauthorized immigrants are employed in the U.S.

## – Distribution

- Texas and California have largest number of unauthorized immigrants

# Unauthorized Immigration

- Mexico's Border with the United States
  - View from the U.S. recognizes motives that compel unauthorized immigrants to enter illegally
    - Employment Opportunities
    - Family Reunification
    - Better Way of Life
  - View from Mexico is more complex
    - Residents of northern Mexico wish for compassion to be shown to unauthorized immigrants.
    - Residents of southern Mexico are less tolerant because of number of unauthorized immigrants entering Mexico from Guatemala.

# Attitudes toward Immigrants

- Immigration Concerns in the U.S.
  - Most views of immigration by U.S. citizens are ambivalent in nature.
    - Border Patrol
      - They would like more effective border control, but they don't want to spend more money to solve the issue.
    - Workplace
      - Most recognize that unauthorized immigrants take jobs from U.S. citizens, but they understand most citizens wouldn't take the jobs so they support a path to U.S. citizenship for these unauthorized immigrants.

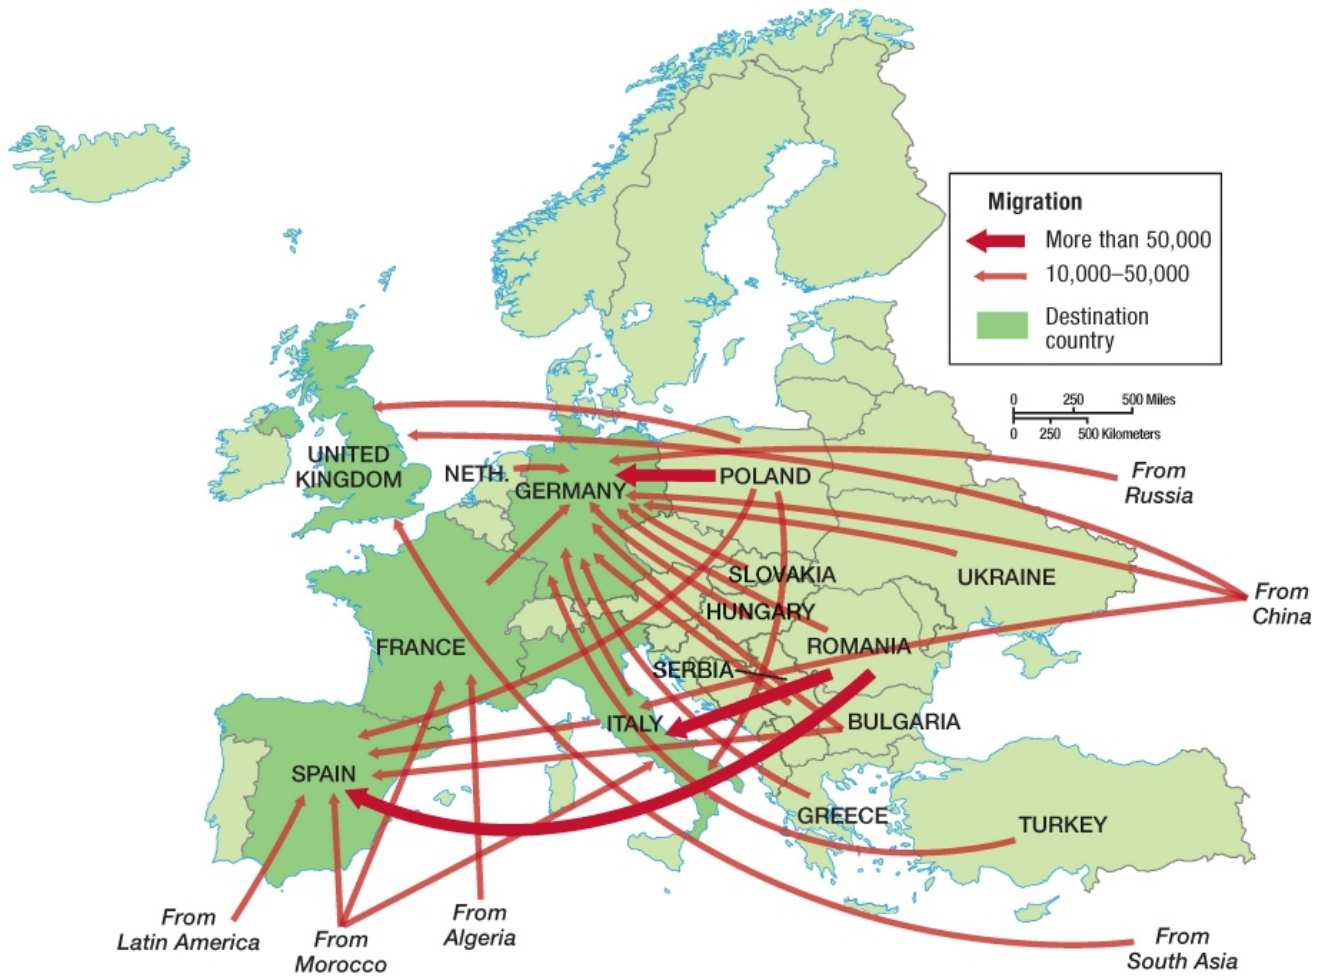

# Attitudes toward Immigrants

- Civil Rights

- U.S. citizens favor letting law enforcement officials stop and verify the legal status of anyone, but they fear civil rights will be infringed upon of U.S. citizens, as a result of racial profiling.

- Local Initiatives

- Polls suggest U.S. citizens believe unauthorized immigration is a pressing matter to the nation, but it should only be dealt with at the federal level and not the local level.
  - » Many were opposed to Arizona’s 2010 law that obligated foreigners to carry a proof of citizenship with them at all times.
  - » More than 100 localities across the nation support additional rights for unauthorized immigrants—such a movement is known as a “Sanctuary City.”

# Attitudes toward Immigrants

- Immigration Concerns in Europe
  - Population growth in Europe is fueled by immigration from other regions of the world, a trend disliked by many Europeans.
    - Biggest fear is that the host country's culture will be lost, because immigrants:
      - adhere to different religions
      - speak different languages
      - practice different food and other cultural habits
    - Hostility to immigrants has become a central plank of some political parties in many European countries.
      - Immigrants blamed for crime, unemployment rates, and high welfare costs.

# Attitudes toward Immigrants

- Europeans as Emigrants
  - Inhospitable climate for immigrants in Europe is especially ironic.
    - Europe was the source of most of the world's emigrants, during the nineteenth century.
    - Most Europeans fear losing their cultural heritage to that of new immigrants, while:
      - Indo-European languages are now spoken by half of the world, as a result of European emigrants.
      - Christianity has the world's largest number of adherents.
      - European art, music, literature, philosophy, and ethics have diffused throughout the world.

# Attitudes toward Immigrants

- Characteristics of Migrants

- Ravenstein noted:

- Most long-distance migrants are male.
    - Most long-distance migrants are adult individuals rather than families with children.
    - Most long-distance migrants are young adults seeking work rather than children or elderly people.

# Attitudes toward Immigrants

- Characteristics of Migrants
  - More males migrated to the U.S. during the nineteenth century and most of the twentieth century.
    - Gender reversed in 1990s when women constituted about 55 percent of U.S. immigrants.
      - Most likely a reflection of the changing role of women in Mexican society.
  - About 40 percent of immigrants in U.S. are young adults between the ages of 25 and 39.
  - Recent immigrants to the U.S. tend to be less educated than U.S. citizens.

# Summary

- On a global scale, the largest flows of migrants are from Asia to Europe and from Latin America to the U.S.
  - Third-world to first-world
- The decision to migrate is a conclusion influenced by a mixture of *push* and *pull* factors.
- Migrants face obstacles in migrating not as much by environmental factors anymore but by political or cultural factors.

# Summary

- Worldwide, the most prominent type of intraregional migration is from rural areas to urban areas. In the U.S., it is from cities to suburbs.
- Americans and Europeans share mixed views about immigration. They recognize their importance to the local economy, but key features of immigration trouble them.
